

The enclosed ampule when properly diluted will give known concentrations.

The sample is prepared using the following instructions:

1. Stabilize the ampule to 20°C.
2. Add 1000mL of laboratory grade water to a two (2) liter separatory funnel.
3. Open the ampule, withdraw and add exactly 1.0mL of the concentrate to the separatory funnel.
4. Mix well.
5. Analyze the resulting solution as if it were a normal sample.
6. Transfer the remaining concentrate to a clean, dry flask or vial and seal. Do not use plastic.
